SUMMARY

Full-Stack Developer with 6 years of experience building fintech and banking products in TypeScript — React and Next.js on the frontend, Node.js and NestJS on the backend. Founded and built end to end a location-based service platform for my own startup: Telegram Mini Apps, Telegram bots, a NestJS backend and a Next.js web app, with a custom algorithm matching each order to the nearest master — 100 users and payback within 2 months. Previously led a 5-developer team at MBank delivering internet banking for legal entities, and at Rocket Tech re-architected a B2B banking platform for Bereke Bank, co-designed its REST API contracts and implemented payment security flows (OTP, digital signing). Fluent in AI-assisted development: builds with Claude Code and integrates LLMs into products (OpenAI API).

SKILLS

Languages: TypeScript, JavaScript (ES6+), HTML5, CSS3

Frontend: React, Next.js, Redux Toolkit, Zustand, React Query, React Router, Tailwind CSS, Ant Design, Material UI, Formik

Backend: Node.js, NestJS, Express.js, REST API design, WebSockets, Telegram Bot API (Telegraf)

Databases & Infrastructure: MongoDB, PostgreSQL, Firebase, Docker, Railway, GitLab CI/CD

Architecture: Feature-Sliced Design (FSD), Microfrontends, Telegram Mini Apps, WebRTC, Performance Optimization

AI: Claude Code (AI-assisted development), LLM integration (OpenAI API)

Testing: Vitest, Jest, React Testing Library, Unit and Integration Testing

Tooling: Vite, Webpack, ESLint, Prettier, Husky, Storybook, Swagger, Git

Practices: Code Review, Mentoring, Technical Interviewing, Agile/Scrum, Kanban, SOLID, Design Patterns

PROFESSIONAL EXPERIENCE

Founder & Full-Stack Developer | City of Masters (own startup)

December 2025 – Present

- Founded a service platform that connects clients with craftsmen in their city: the system uses the exact location of the client and each master and a custom matching algorithm to assign every order to the nearest master.
- Launched to 100 users; the product paid back its costs within 2 months.
- Built the full product end to end: Telegram Mini Apps for clients and masters, Telegram bots, a backend API, a web app and a landing page.
- Developed the backend API with NestJS and MongoDB and Telegram bots with Telegraf, connecting clients, masters and orders across all apps; containerized with Docker and deployed on Railway.
- Developed the frontends with React 19, Vite, Telegram Mini Apps SDK, Next.js 16 and Tailwind CSS.
- Accelerated development with Claude Code as an AI pair programmer across the whole stack — from scaffolding to refactoring — shipping the backend, bots, Mini Apps, web app and landing page in 1 month.

Technologies: TypeScript, NestJS, Node.js, MongoDB, Docker, Railway, Telegraf, React, Next.js, Vite, Tailwind CSS, Telegram Mini Apps

Senior Frontend Developer | Rocket Tech

May 2024 – Present

BBusiness — B2B internet banking for legal entities at Bereke Bank (Kazakhstan); ~150 people on the project

- Architected the frontend around Feature-Sliced Design across 5+ product modules, setting clear layer boundaries that made modules easier to own, test and onboard into.
- Decomposed the monolithic frontend into 4 independently deployable microfrontends, reducing cross-team integration time by 40% and letting teams release without coordinated freezes.

- Migrated the build toolchain from Webpack to Vite, cutting CI builds from ~18 to ~2 minutes (9×) and making a daily release cadence possible.
- Co-designed 12+ REST API contracts with backend engineers and documented them in Swagger before implementation, so frontend and backend could build in parallel.
- Rebuilt the WebSocket layer, raising real-time connection reliability from ~94% to 99.8% for live transaction updates.
- Established the testing practice and grew coverage from 0% to 70%; migrated Jest to Vitest, cutting test runs by 35%.
- Implemented payment security flows — OTP confirmation, digital signing of payments and role-based access for company users.

Technologies: TypeScript, React, Redux Toolkit, Vite, Vitest, Microfrontends, FSD, WebSockets, ESLint, Prettier, Husky, Jira

Frontend Team Lead | MBank
December 2022 – May 2024

Internet banking and CRM for legal entities: accounts, payments, reporting

- Led and mentored a team of 5 frontend developers delivering internet banking for business clients; interviewed frontend candidates for the team.
- Reviewed 100+ pull requests and introduced team review guidelines, shortening average PR cycle time from 3 to 1.5 days.
- Raised test coverage from 50% to 85%, contributing to a 30% drop in production bugs.
- Shipped AI-powered transaction categorization using the OpenAI API, automatically classifying business transactions for clients.
- Automated GitLab CI/CD pipelines, reducing deployment errors by 25% and speeding up releases.
- Ran sprint planning and retrospectives for the frontend team, partnering with product and design to break features into deliverable increments.
- Organized internal tech meetups to share frontend practices across teams.

Technologies: TypeScript, React, Next.js, OpenAI API, Redux Toolkit, Axios, GitLab CI/CD, CSS Modules, Jira

Middle Frontend Developer | NBFit
February 2022 – December 2022

Training and performance tracking platform for 1,000+ active athletes

- Modernized 15k+ lines of legacy vanilla JavaScript, migrating core modules to React and cutting average page load from 4.2 s to 3.1 s.
- Stabilized the legacy codebase, closing 40% of open bugs through systematic debugging.
- Delivered new features — workout calendar, progress charts, leaderboard.
- Built a custom HTML5 video player for workout sessions, increasing average session time by 40%.

Technologies: JavaScript, React, Next.js, Redux Toolkit, Axios, WebSockets, Material UI, Formik, Yup, Day.js

Junior Frontend Developer | Cash2u
September 2020 – February 2022

Admin panel for a consumer finance platform with remote video identity verification

- Developed the admin panel frontend from scratch (React, Next.js, React-admin), giving operations staff one tool to manage transactions and user accounts.
- Integrated WebRTC live video calls for remote identity verification, halving manual verification time.
- Accelerated page loads by 40% through lazy loading and leaner state management.
- Built the Firebase backend for real-time data sync, letting the team ship without a dedicated backend developer.

Technologies: JavaScript, React, Next.js, Redux Toolkit, React-admin, Firebase, WebSockets, Material UI
